

screen fabric roller shades

A lot of folks have been feeling closed in these past several months. Open up their outlook and view with Enlightened Style screen fabric roller shades.

On a scale of 1 to 10, we have roller shade openness factors on both ends, plus options in between. The openness factor determines how much light comes through the weave. The higher the percentage, the more open the weave, resulting in more light and view-through. Open up the

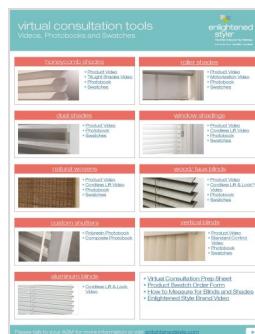

possibilities with [Enlightened Style Roller Shades](#).

A light color reflects more light and heat, increasing energy efficiency, but it also mutes the view. A dark color increases clarity and tones down the glare factor through brightly lit windows.

virtual consultation tools

Many companies are open for business, but not all customers are open to having people in their homes. Our virtual consultation tools offer just about everything you need to accommodate them from a distance. And they're just a click away—organized by product category [on one convenient page](#). There's plenty to share with your customers, either before the appointment, during your consultation, or as a follow-up.

ramping up with safety in mind

We have the green light to proceed, but we're taking some extra precautions to keep our employees safe. Face masks. Hand sanitizing stations. Plexi dividers to help ensure social distancing at work stations. These, and other protocols, have been implemented to create a safe working environment and help ensure our facility meets all safety guidelines so that we can continue to provide you with the service you've come to expect.

IN CASE YOU MISSED IT

vista products and century shade and blind co. join CBG

Effective May 19, Vista Products and Century Shade and Blind Co. joined Custom Brands Group. Both of these companies are particularly strong in their regional marketplaces; Century in California and Vista Products in the Southeastern United States. [Read more...](#)
